

JAVA Instruction

Java2SE Runtime Environment 6.0 updates X Installation Instructions (Windows Vista Version)

1. Click on Start Button 
2. Click on Control Panel
3. Click on **Programs**
4. Underneath **Programs and Features**, click **Uninstall a program**
5. Scroll down to see which version of Java you have running. There should be only one instance of J2SE Runtime Environment 6.0 update 7 (or latest version). If you have more than one instance, right click on the various J2SE and uninstall them until you only have one instance remaining.
6. If you do not have any Java J2SE, please point your browser to this URL:
<http://java.sun.com/javase/downloads/index.jsp>
7. Scroll down to Java Runtime Environment (JRE) 6.0 Update X (latest version) and click on 
8. Select the correct platform (Typically Windows/Mac/Linux)
9. Leave Language selection set to Multi-language.
10. Check the "I agree..." box
11. Click the continue button.
12. Click the link underneath the Windows offline installation choice.
13. Click on Run.
14. Click on Run again.
15. Follow the steps in the installation wizard.
16. Select typical setup.
17. Click Accept
18. Click Finish when the installation is completed.
19. Restart Computer.

*Note: JAVA runs auto updates. If you update your Java, be sure to uninstall the previous instance.
